

Type 1 Diabetes Mellitus

Accu-Chek® CONNECT at School (CATS) Pediatric Study

Trial Status
Completed

Trial Runs In
1 Countries

Trial Identifier
NCT02609633 RD002489

The source of the below information is the publicly available website ClinicalTrials.gov. It has been summarised and edited into simpler language.

Trial Summary:

This interventional, 6-month post-marketing study is designed to evaluate the change in diabetes-related distress among parents/caregivers of school-age children and adolescents with type 1 diabetes (T1D) who are receiving multiple daily injections (MDI) therapy. Investigational sites will be assigned using cluster randomization, with approximately 10 to 20 children at each site. In order to maintain a true control group for comparison, the investigational sites will be randomly assigned to the Accu-Chek® CONNECT Diabetes Management System (DMS) or usual care/continued use of current DMS devices.
