Non-Small Cell Lung Cancer (NSCLC)

Neutropenic Sepsis in Patients With Non-Small Cell Lung Cancer Treated With Single-Agent Docetaxel and Associated Resource Use in the UK

Trial Status
Completed

Trial Runs In
1 Countries

Trial Identifier
NCT02658747 ML30033

The source of the below information is the publicly available website ClinicalTrials.gov. It has been summarised and edited into simpler language.

Trial Summary:

This is a multi-center retrospective observational research study collecting data for participants initiated on docetaxel for the treatment of relapsed non-small cell lung cancer (NSCLC) up to 6 years before start of data collection and who have completed/stopped docetaxel treatment at least 30 days prior to data collection. The primary goal of this study is to describe the percentage of participants with at least one neutropenic sepsis (NS) episode following initiation of treatment with single-agent docetaxel. Data will be collected until end of docetaxel treatment plus an additional 30 days to allow for presentation with toxicity.
