

Rheumatoid Arthritis

A Time to Cardiovascular Event Analysis Comparing Tocilizumab to Other Biologics in Patients With Rheumatoid Arthritis (RA)

Trial Status
Completed

Trial Runs In
0 Countries

Trial Identifier
NCT02797769 GA30048

The source of the below information is the publicly available website ClinicalTrials.gov. It has been summarised and edited into simpler language.

Trial Summary:

This retrospective cohort study will analyze data from multiple large U.S. health insurance claims databases to compare use of tocilizumab to other biologic disease-modifying anti-rheumatic drugs (DMARDs) in real world patients with RA. Using the date of dispensing as the index date, the analysis will compute the time to first event for several cardiovascular outcomes.
